

KIATO Safety Scalpels help to minimize the risk of surgical blade injuries that occur before use, during passing, between steps of the procedure, after use and during disposal. The Safety Scalpel is designed to be used single handedly.

1. Ship/Pass position:

Sheath covers the blade to safely pass. Audible click confirms sheath is extended and covers blade. To permanently lock refer "To Dispose".

2. Use position:

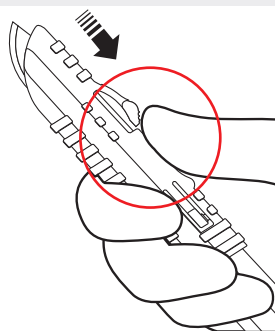

The Surgical Blade is exposed and ready for use. Audible click confirms sheath is fully retracted.

Directions for use

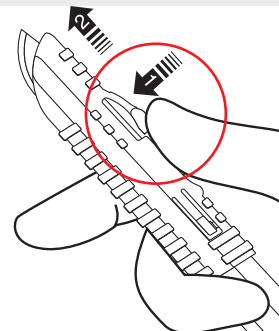

To Use:

Grip Cap behind release button with thumb & forefinger & retract sheath fully till it clicks. The blade is now exposed and the sheath is locked in the "USE" Position.

To Pass:

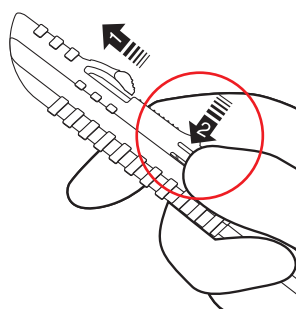

Gently press release button downwards with thumb & slide sheath forward to initial position till it locks in the pass position.

To Dispose

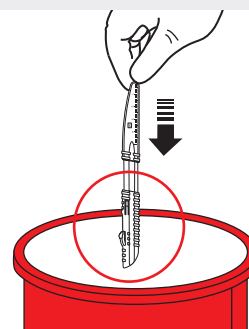

Step 1

Slide Sheath to "pass position". Push dispose button inwards into handle till it clicks & locks.

Step 2

Dispose in an approved sharps container.
